8 Piece LED Truck Bed Lighting Kit

Warning: The installation of this kit is recommended to be installed by a licensed professional. The improper installation of this kit will void all warranties.

Warning: Please check your state and local laws before installing this truck bed lighting kit. Every state has different policies and procedures in place regarding aftermarket vehicle accessories. LEDGlow is not responsible for any fines that you may receive while using this truck bed lighting kit. This kit is for off road use only.

Please read the following instructions thoroughly before installing this kit.

1. Prior to installation clean the proposed mounting area with soap and water, then wipe down with alcohol and let dry.
    - **Optional:** Apply a thin layer of adhesive promoter to the mounting area and let dry, before installing each pod. This promoter is a type of primer that combines with the glue on the 3M tape for a secure mounting on your surface. For best results install each pod within one hour of the adhesive promoter drying.
2. Arrange the lights in your truck bed the way you plan on installing them. Be sure there is enough space under the bedrail or tonneau cover to mount each pod. If the strand of lights is too long, gather excess wire between the pods and secure them with a zip tie or you can double up the lights or continue them around the front of your truck bed.
    - **Note: LEDGlow does not recommend cutting the wires between each pod in order to shorten them. This will void ALL warranties**
3. Once you have determined where you want to mount each pod, remove the backing on the 3M tape and secure each pod to your bedrail or tonneau cover. Be sure to press firmly on each pod to make sure it is firmly secured.
    - **Optional:** For extra security, use the supplied screws, along with the included 3M tape. Pre-drill using a 3/32nd drill bit, and be sure the screws will not go all the way through your bedrail or tonneau cover.
4. Route the power wires from both light strands through the truck bed and into your cab using an existing hole with a rubber grommet.
    - **Note:** If you do not have an existing hole in your cab, you can drill a new hole to pass the wires through. If you are drilling a new hole, be sure to install a rubber grommet to ensure the metal does not cut the power wires.
5. Connect 16 or 18 gauge automotive wire to a positive 12 volt source, for example, the positive side of your battery or at a 12 volt source in the fuse box.
    - **Note:** Be sure to install a 5 amp fuse inline from the power supply.
    - **Note:** If you would like the bed lights to be able to be turned on without your vehicle being on, connect this power wire to a constant 12 volt source
6. Attach the wire that you just connected to the positive 12 volt source to the #1 post on the on/off switch using the supplied female spade connector.
    - **Note:** The posts are numbered on the side of the switch.
7. Connect both power wires with the white stripe on them to post #2 on the on/off switch using the supplied female spade connector.
    - **Note:** If you want to use an existing or different switch be sure to verify that the switch is rated for 12 volts, and be sure to follow the specific instructions for that switch.
    - **Note:** Post #3 is not used
8. Connect both power wires that are solid black to unpainted ground source.
9. Be sure to secure all loose wires with wire ties or zip ties.
10. Once the Truck Bed Lighting Kit is installed and powered, turn it on to ensure it is functioning properly
